FEATURES & ADVANTAGES

PPXsio20

Electrical lift and manual lowering

- Sensitive lifting and lowering
- Drive and operating controls in easy reach position
- Automatic braking when the control arm is released
- Suitable for both left- and right-handed users

Display

- Battery discharge indicator
- Operating hour counter
- Battery management system
- On-board diagnostics via error code

Application

- For use on medium to long transport routes
- Powerful 24 Volt drive with Li-ion-Power
- Smooth and quiet operation
- Always usable with the lithium-ion battery from top-up charging
- Quick charging times
- Manoeuvrable in the tightest of spaces due to folding platform
- Programmability for adapted driving behavior

PRODUCT DESCRIPTION

The CLARK lithium-ion low lift pallet truck PPXsio20 is a robust and stable low lift pallet truck designed for industrial use on medium to long transport distances. Whether for loading and unloading trucks or for heavy material transport in warehouses, CLARK warehouse technology is designed for hard applications. Intermediate loads can prevent downtimes for reloading. The Li-Ion battery thus ensures maximum availability. Even during long periods of use, no battery change is necessary - due to the intermediate charging capability. As the Li-Ion battery does not release any gases during charging, no ventilated charging chambers are necessary.

Operator Platform

The foldable operator platform is standard for the PPXsio20 increases both safety and comfort. The platform can be folded up manually and is ideal for use even in confined spaces. The low level standing height makes it easy to get on and off the unit during operation. If the driver steps off the platform, the unit automatically switches to standby mode and the unit can no longer be operated. In application with activated side safety guards, maximum driving speeds of up to 12 km/h are possible. When the side safety guards are closed, the maximum driving speed is automatically reduced.

Productivity

All operation functions for lifting, lowering and driving are positioned in an ergonomic safety tiller handle with easy to reach switches. This allows the operator to concentrate solely on the conveyance process. The speed reduction during cornering ensures a high level of safety in curves.

Advantages of Lithium-ion technology

Top-up charging can be used between full charges without affecting the service life of the battery. The battery can be recharged with any 230-V socket. Up to 7% of battery capacity can be recharged in just 10 minutes.

Reliability

CLARK has used tried and tested components and materials in the design of the low-platform trucks and built them solidly to ensure a long service life, high performance and safety.
